Providing Unique Solutions

No matter what type of business your company is in, you need the ability to easily control your equipment and processes, collect and analyze data, and manage your resources.

With your business in mind, *CONTROL DYNAMICS* can analyze your new or existing system and design a software solution. Whether you need an operator interface to a single machine or to network several machines and exchange data between the shop floor and management, we can develop an appropriate software solution.

CONTROL DYNAMICS has both electrical and software engineers who have the ability to provide machine control as well as software solutions. This blend of talent and experience allows us to provide a seamless, "closed loop" data management system allowing your company to function more efficiently and increase profits.

Software applications from *CONTROL DYNAMICS* are designed with one basic goal: to provide an effective solution to our client's need. The results of our solutions will allow your company to increase production, efficiency, and profits.

Using A Wide Range of Development Tools

At *CONTROL DYNAMICS*, we use industry proven development tools for our solutions. We place high importance on making sure that our staff is aware of and trained in these tools and techniques. This knowledge includes both the computer operating systems and the programs that run on them. By maintaining a high level of knowledge and experience, we can provide a robust solution that will give your company years of reliable service.

Although the software industry has a wide variety of proven tools, it is an industry filled with constant change. The *CONTROL*

DYNAMICS' staff is constantly researching, learning, and experimenting with the newest development tools and methods. We can help filter out the unneeded technologies and select the ones that meet the needs of our customers. By allowing us to be a resource for these decisions, our customers can focus on what they do best and we can help them to work more efficiently.

The Software Solutions Group at *CONTROL DYNAMICS* uses wide ranging resources to meet its goal of providing an effective solution to our customer's needs.

Our Goal

CONTROL DYNAMICS INC. will design and implement every project with a strong commitment to quality, value, performance, communication, and service. This guiding principle will ensure customer satisfaction and build long term relationships through repeat business. We strive to maintain a corporate environment that supports this goal.
